

YELS

The most famous Cosmetic and Medical Cream by
Protecta-skincare, inc.

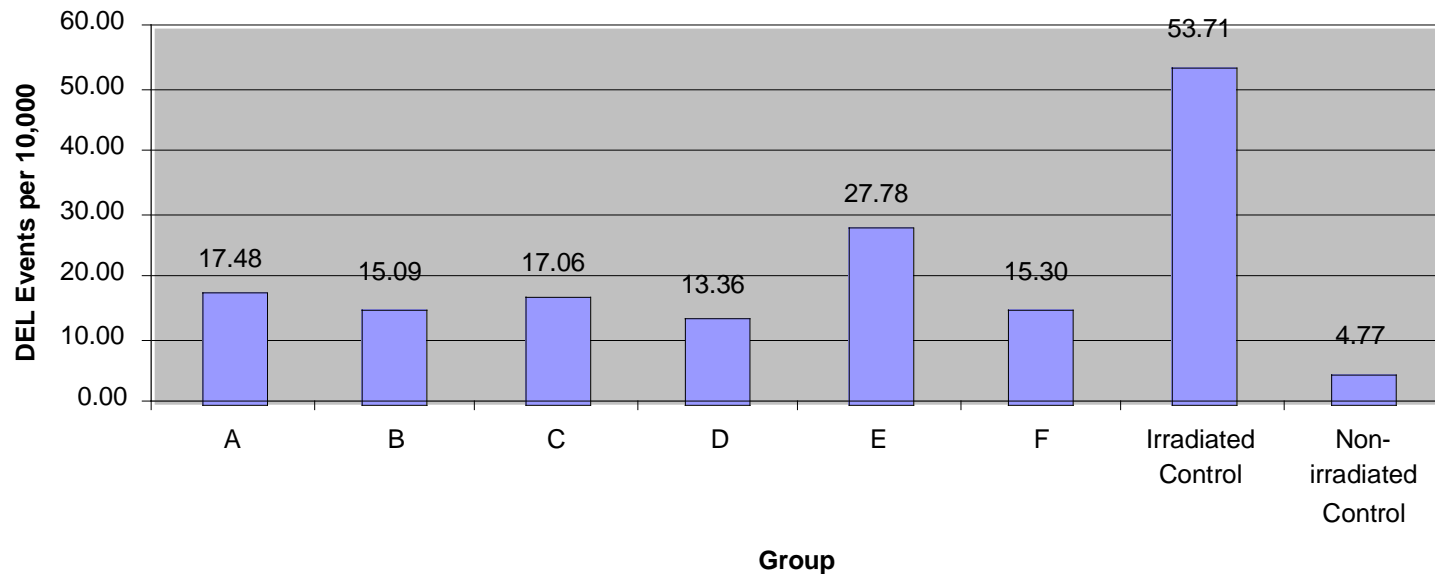

Robert H. Schiestl

Professor emeritus of Pathology, Environmental
Health Sciences and Radiation Oncology at UCLA
and at
4 huge public Universities in China

DEL Assay: High Throughput

- We tested 16,000+ compounds of the Asinex Target Library Set and the Prestwick Library, compiled by the Asinex Corporation containing kinases, proteases, GPCR's and ion channels—has produced 36 “hits”
- Out of these 36 hits: 10 were selected for further studies

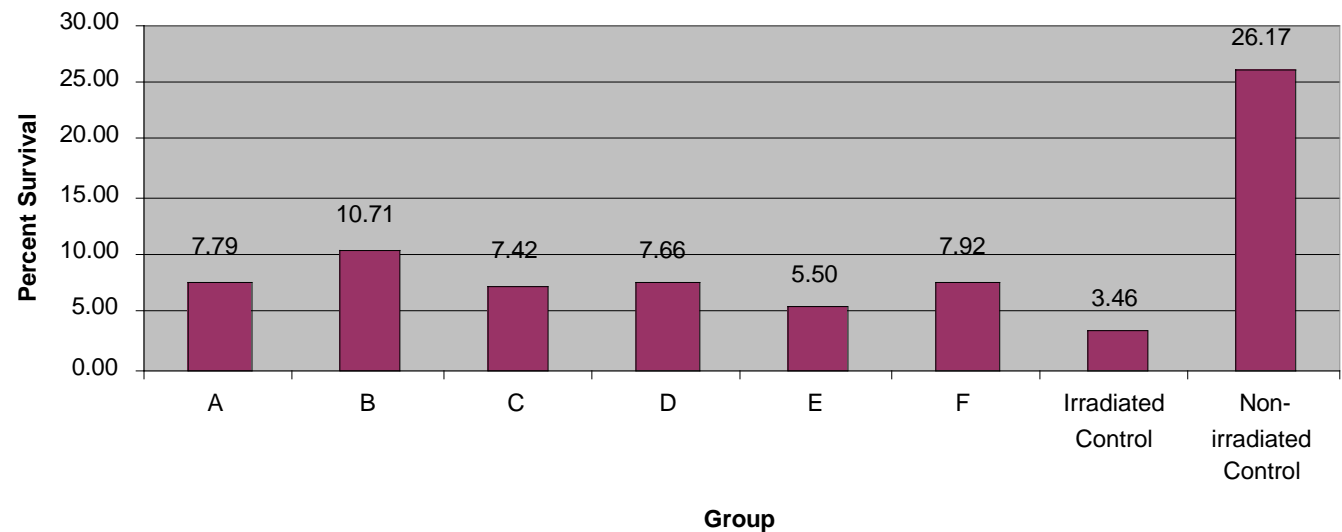

DEL Events

Decreased deletion frequencies observed in all treatment groups from the Targeted Library.

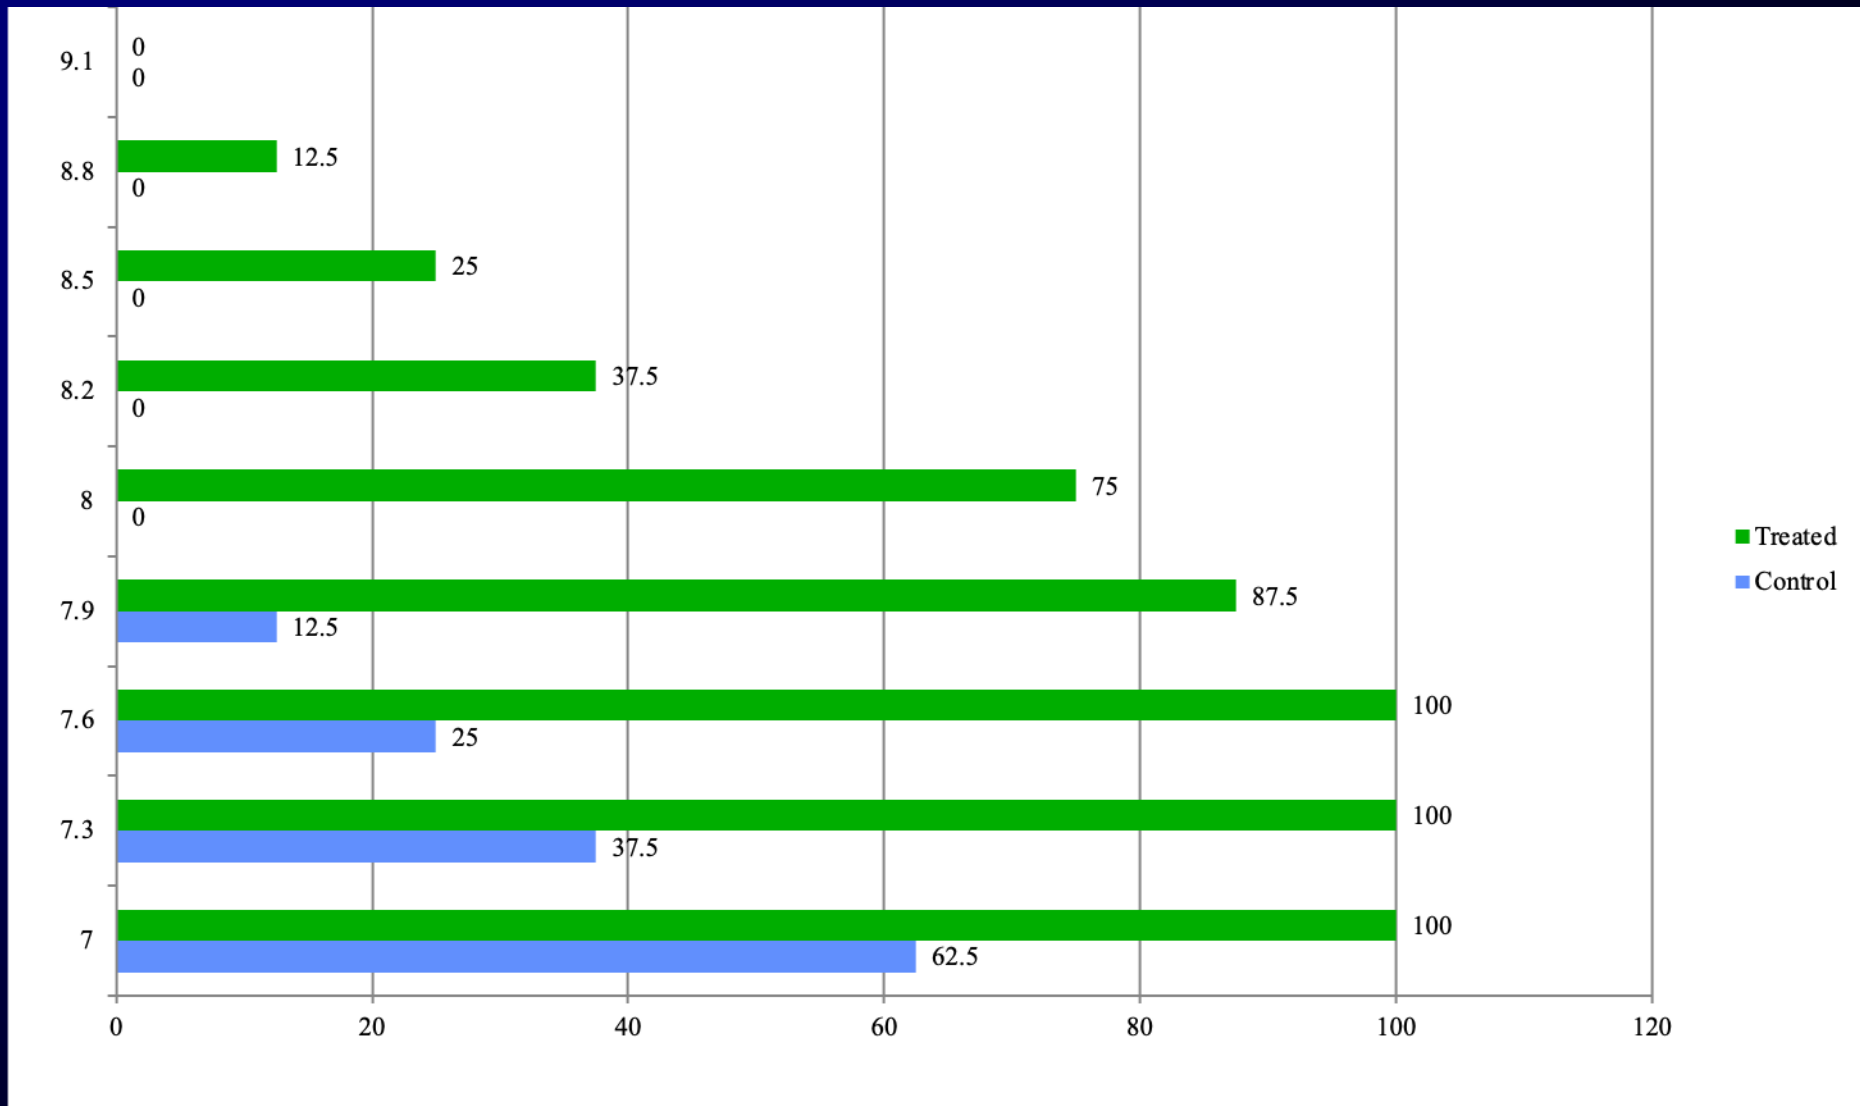

Increased survival seen in all treatment groups from Targeted Library. Differences statistically significant with p-values less than .001 in all groups

Survival

Toxicity Study: Design and Results

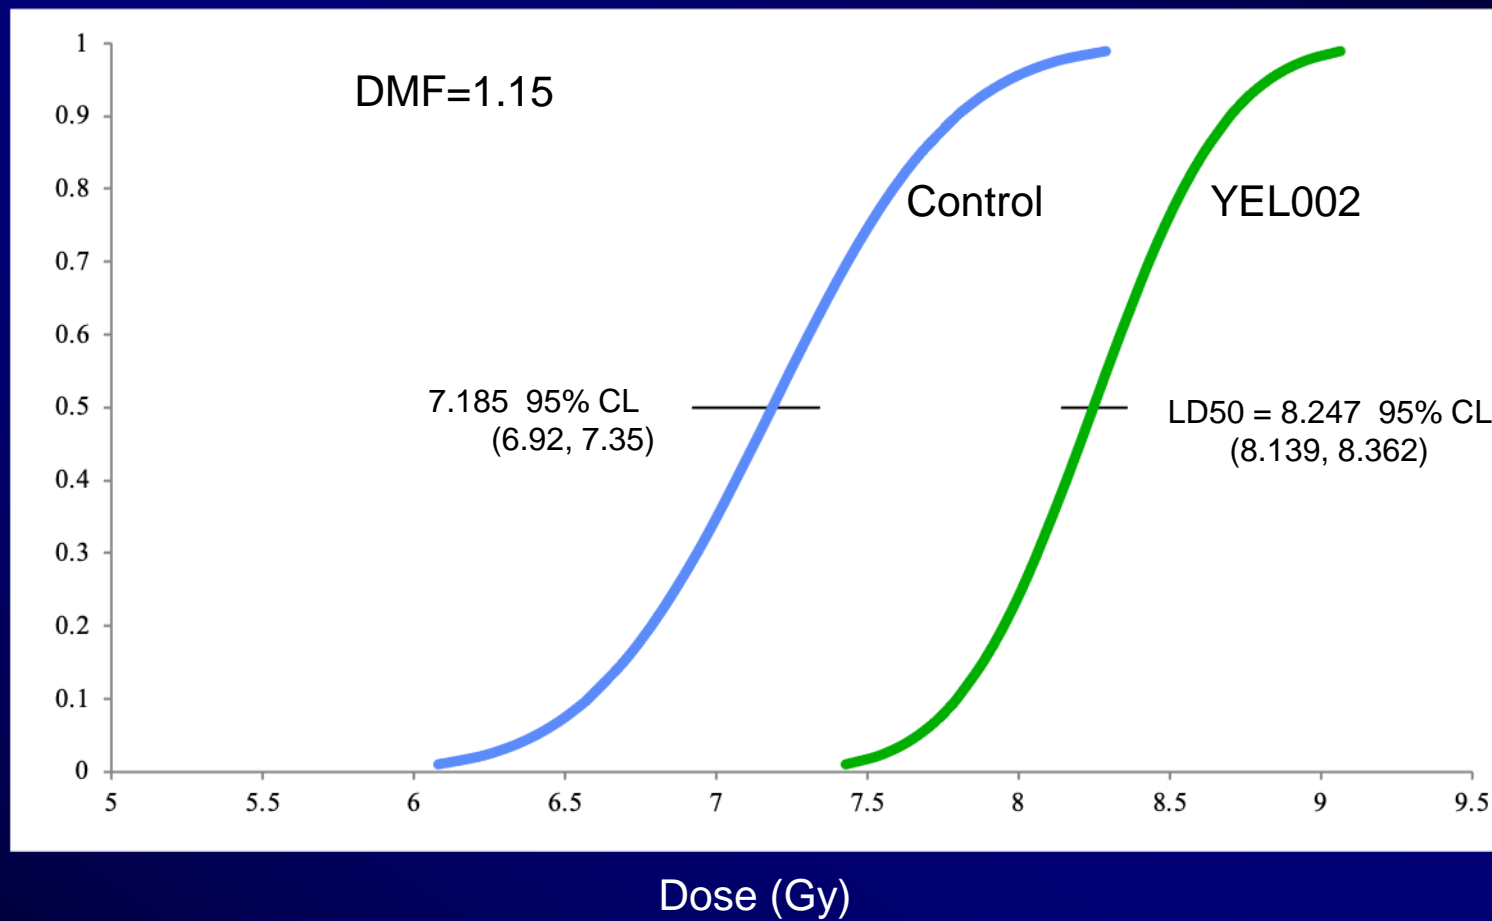

- Six re-confirmed compounds from the Targeted Library were tested for toxicity in 3 different IP concentrations:
 - 150 mg/kg, 75 mg/kg, and 5 mg/kg (dissolved in PBS)
- All mice survived a normal life span and have on average gained 2.5 grams since the start of the study. No toxicity, physical or behavioral abnormalities observed.
- A teratogenicity study over two generations was also negative.

Survival post Irradiation with Yel002 Treatment

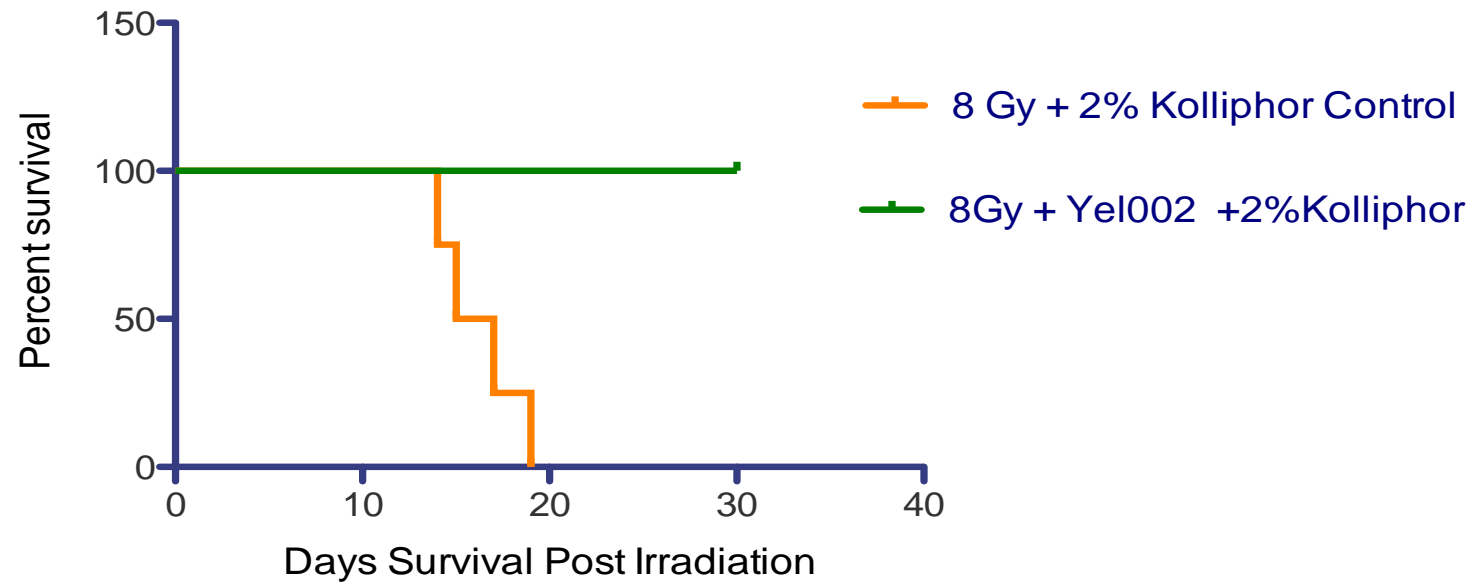

Male C3H mice (n=8 per group) have been irradiate and treated with s.c. YEL002 (75mg/kg) at 24,48,72,96,120 hrs. Controls were treated with saline carrier.

Probability of survival

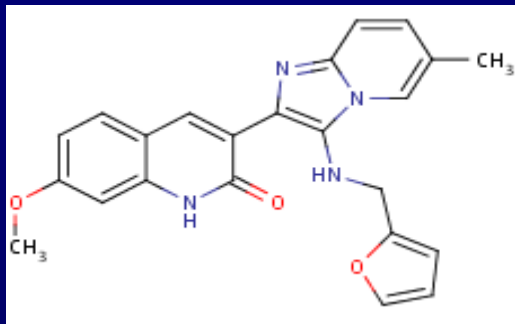

Mouse Survival After LD100/30 Irradiation. With Kolliphor Yel002 is even more potent

Mouse Survival After 8Gy Irradiation: Dose Response with >2 Year Old Yel002

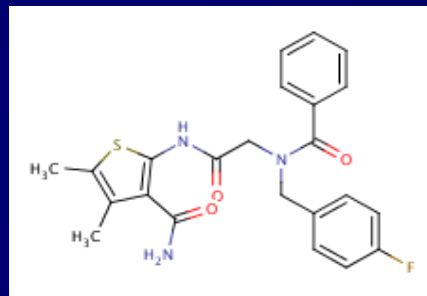

16 mice were irradiated at 8 gy (LD100/30) using a Cs-137 Irradiator in a sterile facility. Control mice received only 2% Kolliphor carrier in saline, while experimental mice received 75 mg/kg Yel002 in 2% Kolliphor/saline carrier. 5x24 subcutaneous protocol

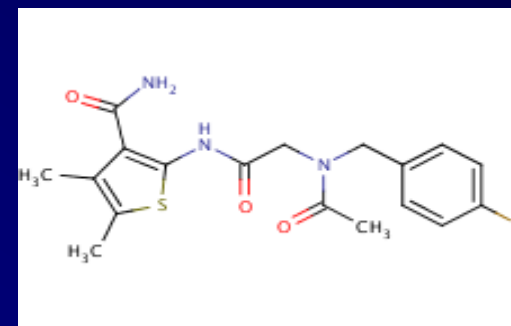

YEL001, YEL002 and Their Analogues

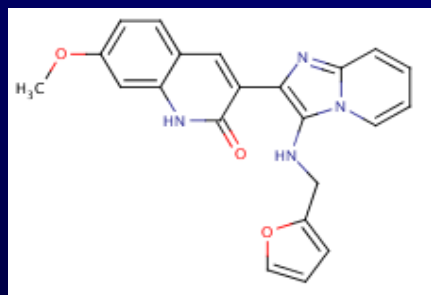

Yel2

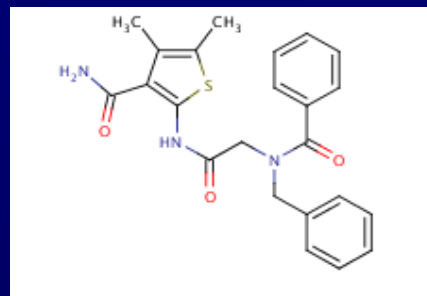

Yel1

Yel1.1

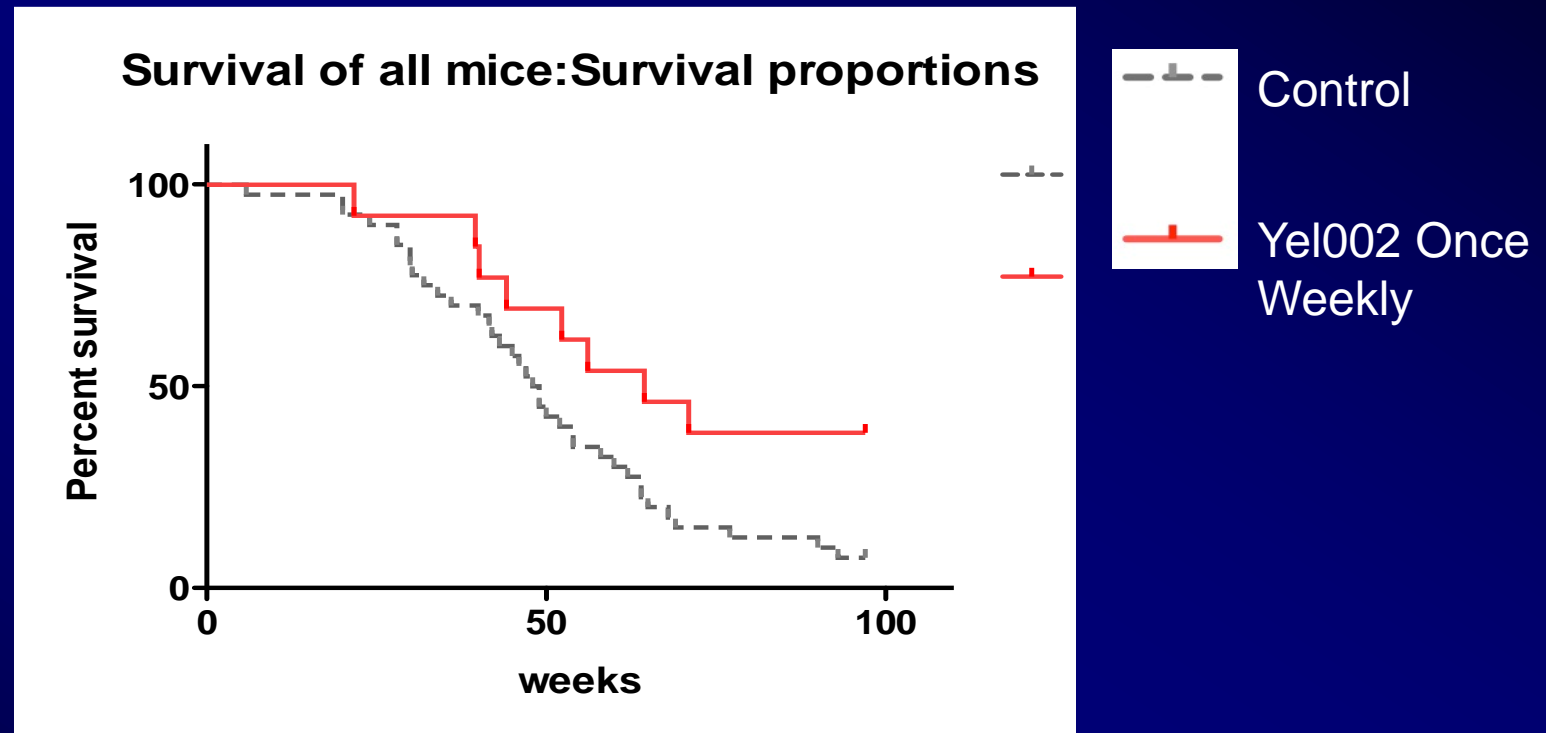

Yel2.1

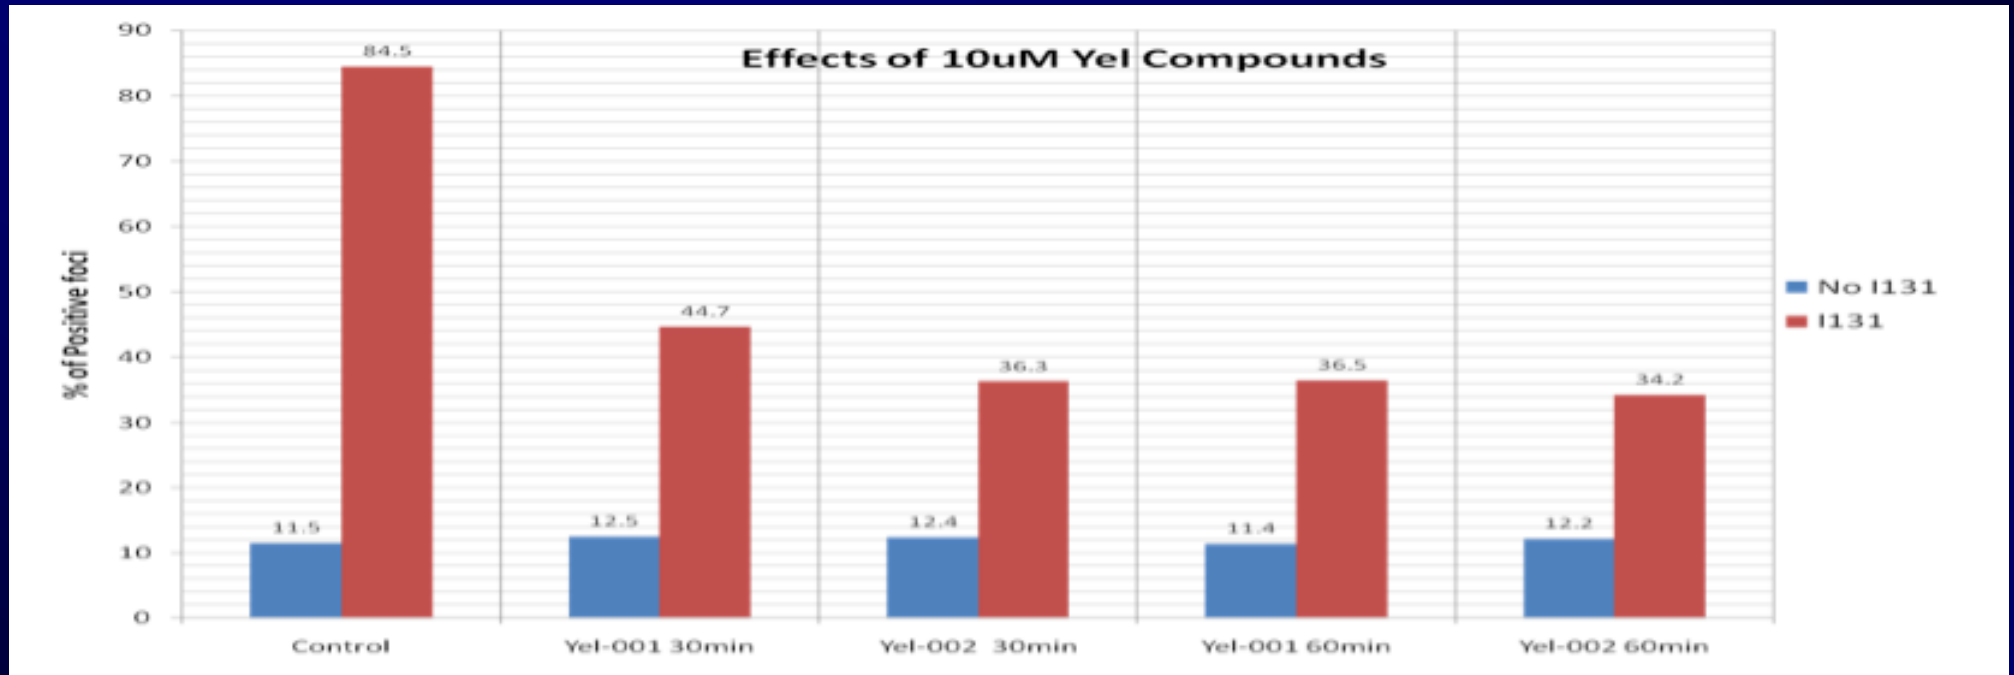

Yel1.1

ATM deficient Mouse Survival Over 97 Weeks When treated with YEL002

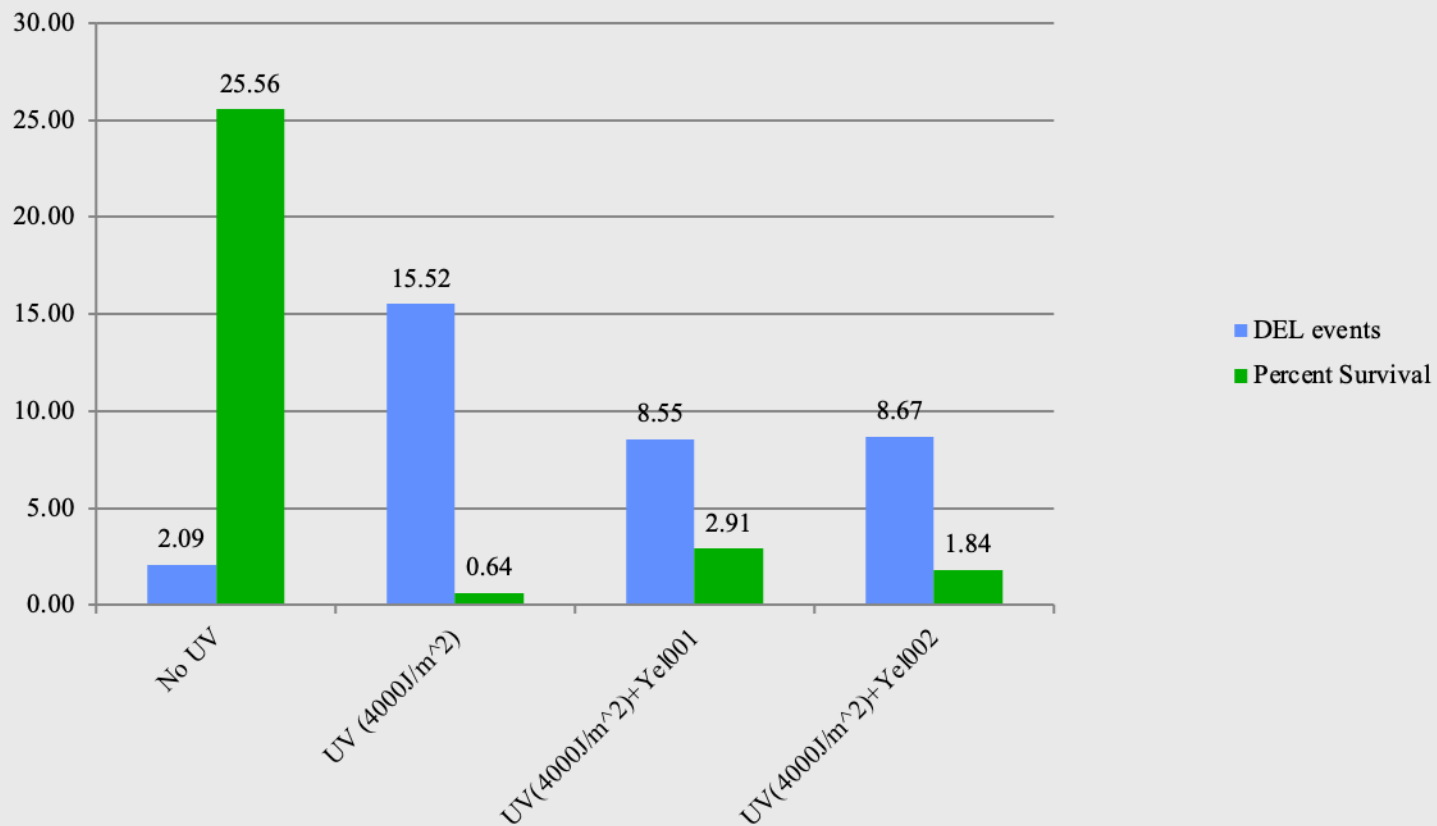

Kaplan Meier Curve. Control Mice consist of 40 ATM $-/-$ mice. Yel002 75 mg/kg/week injected mice consist of 8 ATM $-/-$ and 5 ATM SRI truncation mutation mice. $p = .028$ by Mantel Cox Log Rank test. Median survival time = 64 weeks vs. 48 for controls. 16 weeks difference mice live 33% longer with YEL002, which is 20 years in human live expectancy

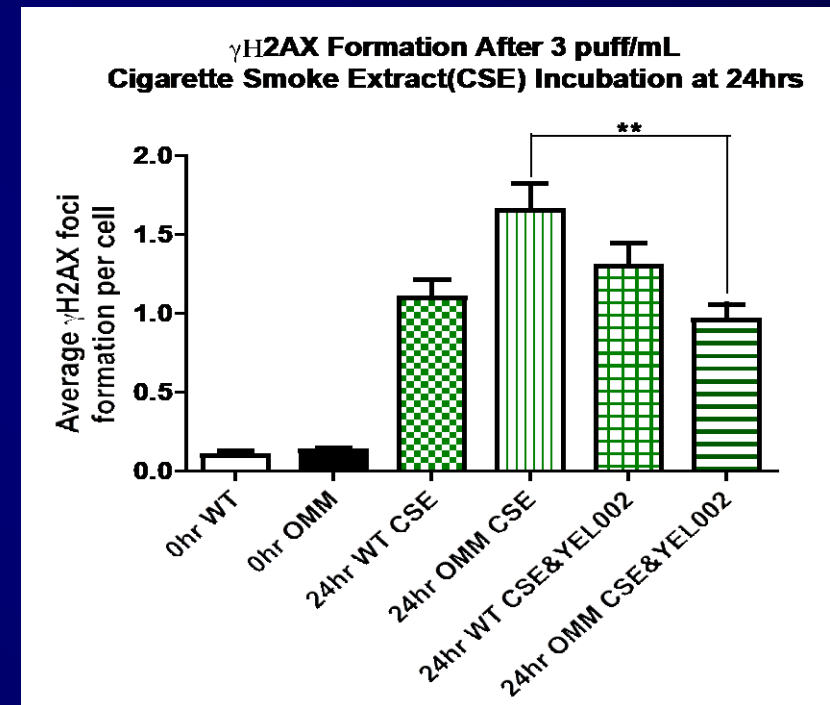

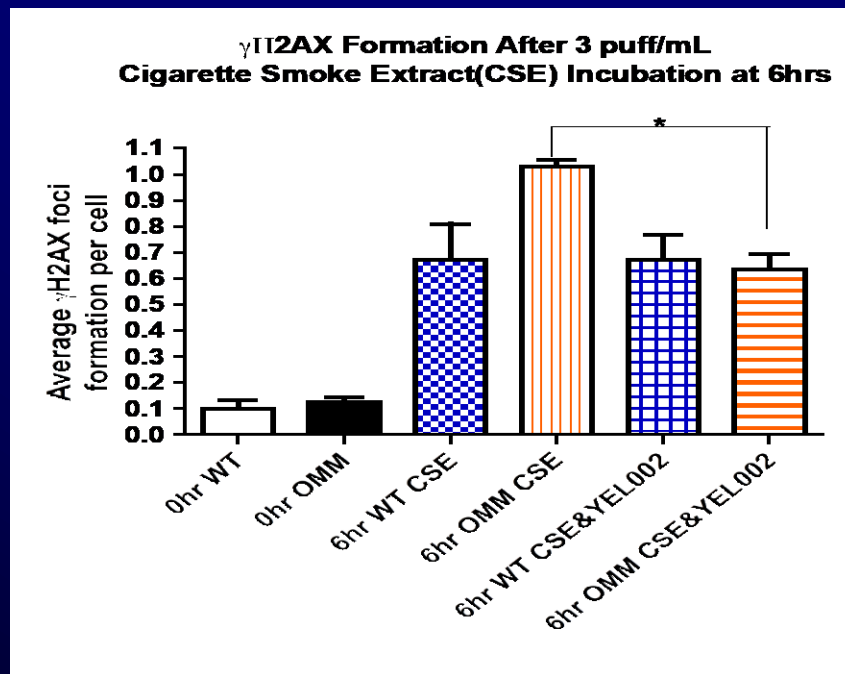

Effect of YEL001 and YEL002 as mitigators against DNA double strand breaks induced by Beta-decay of radioactive I131 in human and rat thyroid cells.

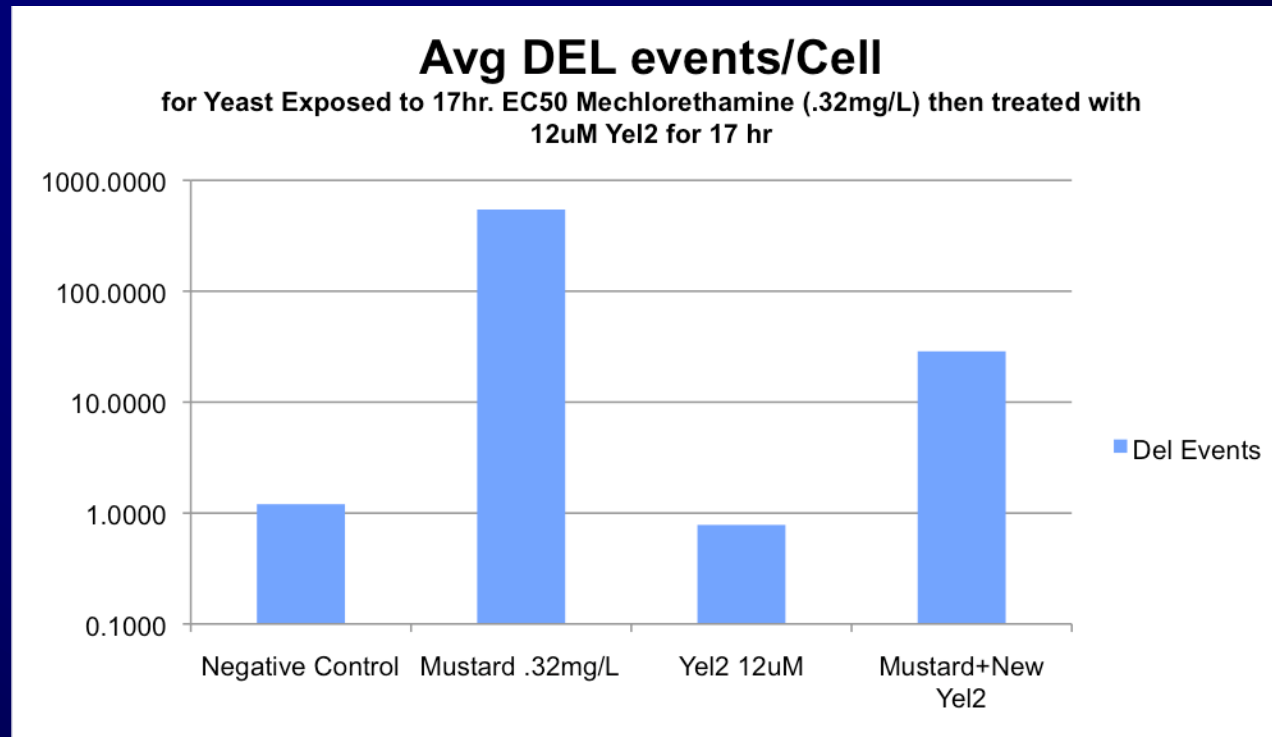

Effect of YEL001 and YEL002 as mitigators against UV induced toxicity and DNA damage.

YEL002 significantly reduces cigarette smoke induced double strand breaks at 6 and 24hrs in Ogg^{-/-} Myh^{-/-} double knockout mice

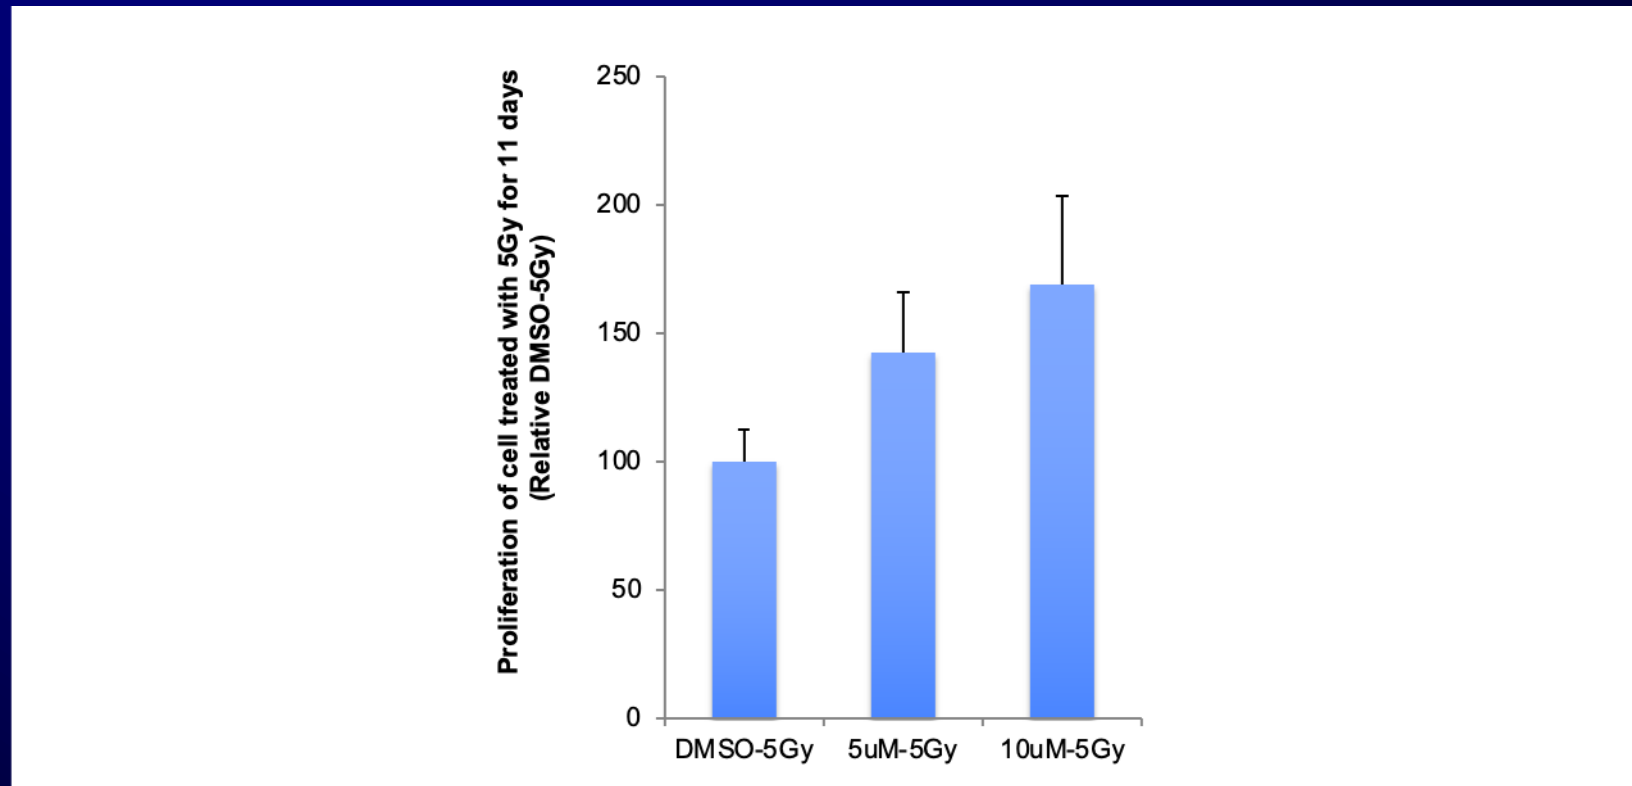

YEL002 Reduces Nitrogen Mustard (Mechlorethamine) induced DNA Deletion Events

- Mechlorethamine, or nitrogen mustard, is an alkylating agent which causes significant DNA damage and deletions even in surviving yeast cells when administered at EC50 levels (0.32mg/L) for 17 hours.
- Treatment with YEL002 for 17 hours post-exposure to mechlorethamine appears to drastically cut DEL rates (mechlorethamine avg = 545 events/cell, treated avg= 28.7 events/cell).

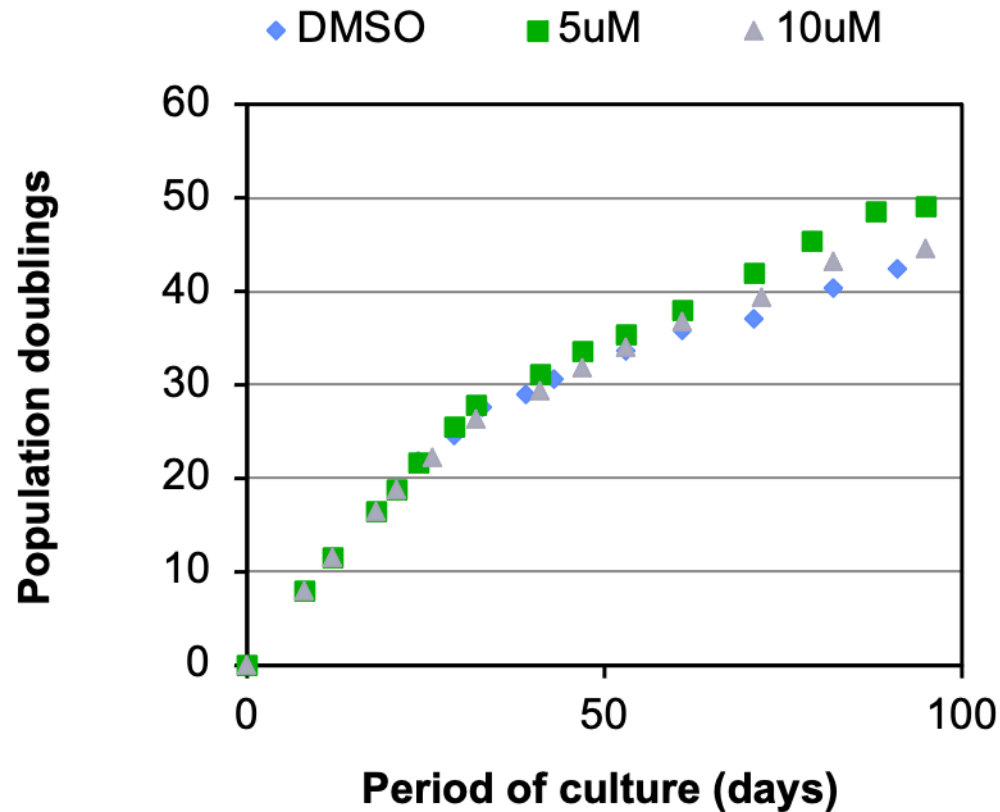

YEL002 inhibits radiation induced cell ageing in human skin cells

Irradiated human keratinocytes live twice as long (100% longer) upon exposure to YEL002

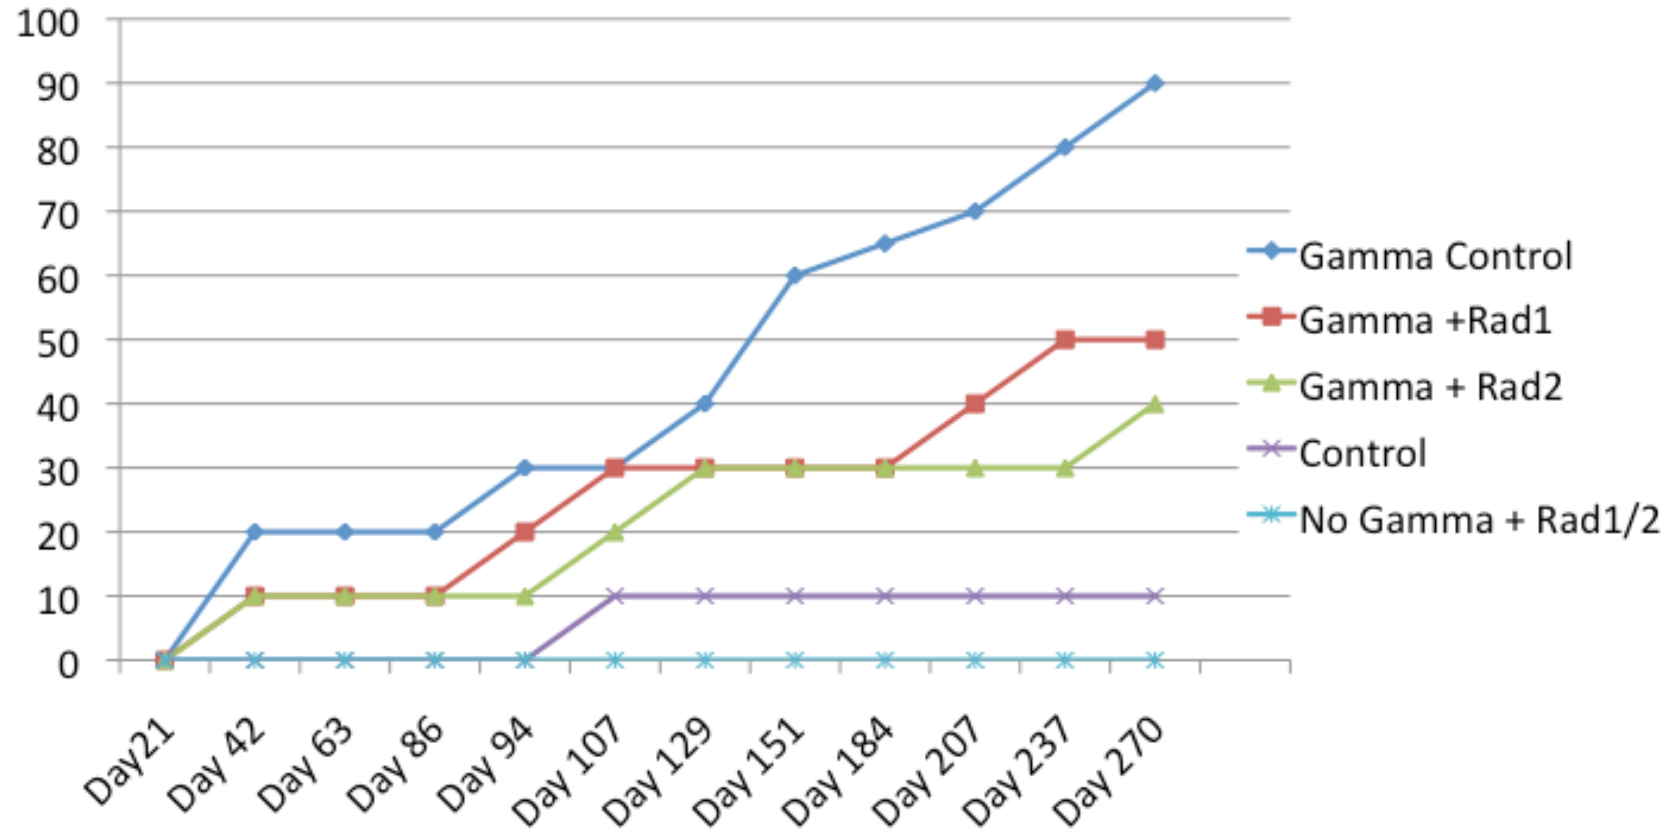

YEL002 inhibits cell ageing in human skin keratinocytes

They live 15% longer

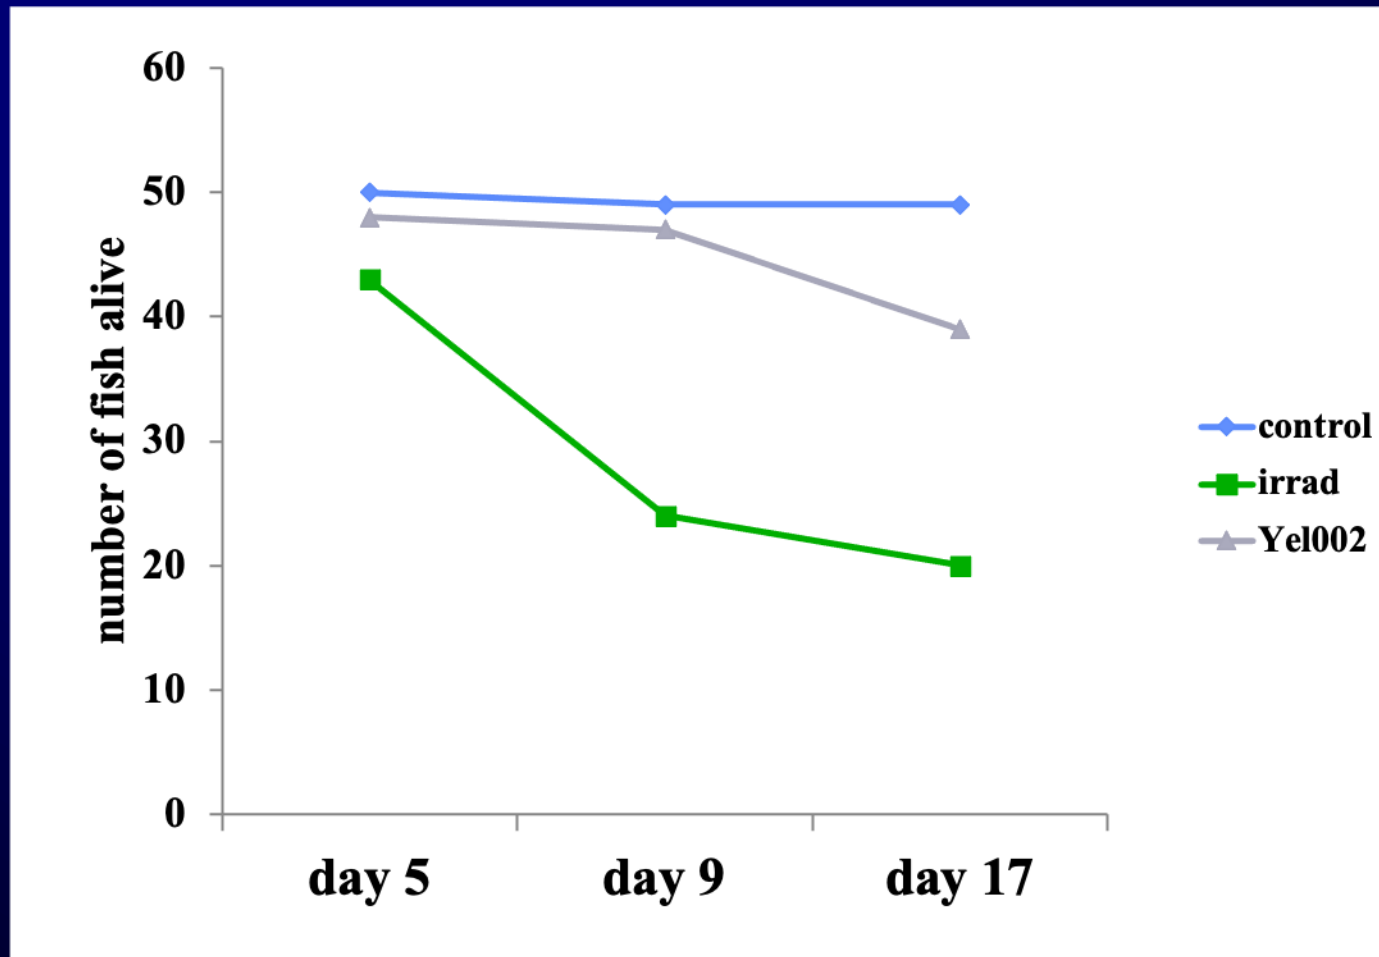

AFRR1 data

YEL002 reduces Radiation induced leukemia by 60%

YEL002 improves survival of zebrafish larva irradiated at 15Gy at the age of 2 weeks

YEL002 treatment up-regulated 244 unique proteins

- Enrichment of ATM Signaling (p-value=5.75E-05)
- Including components of DSB repair by:
 - homologous recombination (*p-value=7.08E-04*)
 - and non-homologous end joining (*p-value=4.47E-05*)
- ATM –PLGS score 604
- MRE11 – PBS-treated/Yel-treated = .42
- NBS – PLGS score 678
- RAD50 – PLGS score 713

- *Any PLGS score above 100 is considered significant and unique

ADDITIONAL DNA REPAIR ENZYMES

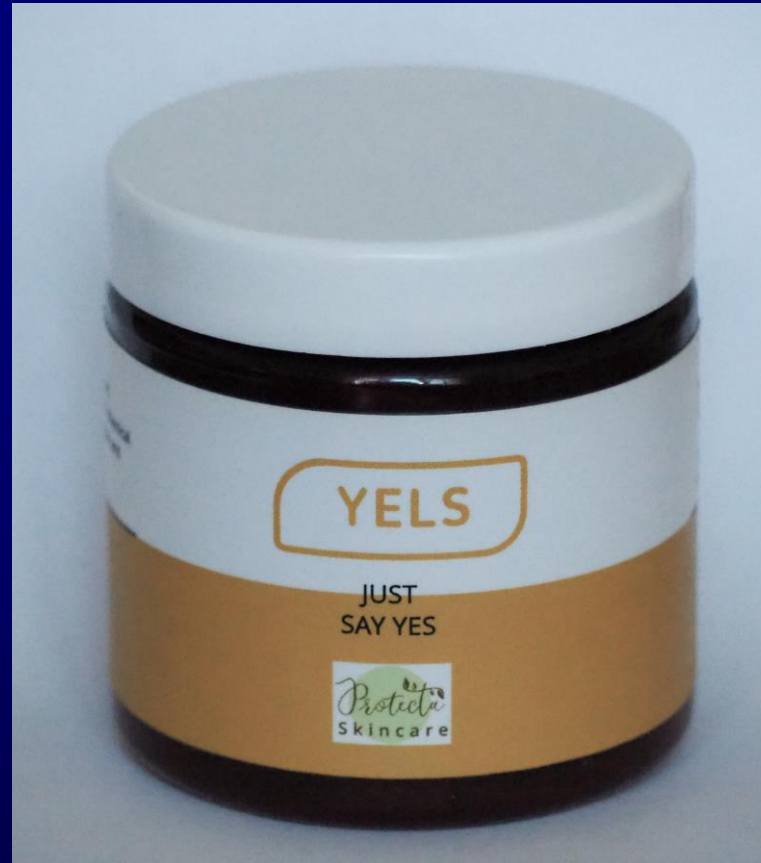

- APEX nuclease 1 –base excision following oxidative DNA damage (PLGS score 2,100)
- Damage-specific DNA binding protein 1 (DDB1) (PLGS score 1,909)
- XRCC4 – PLGS score of 715
- And structural maintenance of chromosome (SMC) proteins 2,3,4 (PLGS score of 868, 1,407, and 537 respectively)

YELS, Cosmetic and Medical Cream

- 1% Yel002 Combined with
- Aloe Vera gel
- Avocado oil
- Bees wax
- Cacao butter
- Ginger oil
- Cosphaderm

- Use: for cosmetic applications 1-2 times a day a thin coat, for medical applications 4-5 times a day a thick coat that absorbs in 5-20 minutes into the skin.

Cosmetic and Medical Cream YELS from Protecta-skincare, inc.

www.protecta-skincare.com

YELS, Cosmetic and Medical Cream

- Makes skin more soft and firm
- Is anti inflammatory and anti ageing
- Protects against everything under the sun, including ionizing radiation, UV, chemical carcinogens, chemical warfare agents, radioactive iodine, and cigarette smoke, etc.
- Use as a biological sunscreen
- Human kerationocytes live 15% and mice 33% longer without cancer with the active chemical YEL002 in the cream.
- Beautifies the skin and makes it glow, completely prevents skin wrinkles. The next version will get rid of existing wrinkles.
- Is antibacterial and antifungal
- www.protecta-skincare.com

YELS, Cosmetic and Medical Cream

- It heals every skin disease we tried it for so far, including psoriasis, keratosis, eczema, acne, precancerous skin lesions, bruises, inflammation, of the face and toes, sunburn, scars, discolored skin patches, stops itching from insect and tick bites, and help prevent skin cancer, any pain on or up to 1.5 inches below the skin.
- It has deep tissue effects and heals whiplash syndrome, cysts, abscesses, arthritis, lipomas and fibromas.
- It is a powerful pain killer: pains disappear at a rate 7x faster than without the cream. It has been observed that neck pains, knee pains, back pains, wrist and hand pains, inflamed tendons, rib and leg pains have been healed.
- It also makes your hair grow where it should grow. Thus, it heals alopecia.
- www.protecta-skincare.com

YELS, Cosmetic and Medical Cream

- It heals surgery incisions and the pain goes away 7 times faster than without the cream, useful for any surgery because almost every surgery goes through the skin. All the time we are finding new activities.
- Animal use: Animals have the same diseases and skin problems as people. One example, Opus a huge dog was scratching his chin on concrete because it was itching. It got inflamed itched more, more scratching until it was an open wound and the dog had to have a plastic cone around his snout so that he could not scratch any longer and was very unhappy. My cream killed the bacterial inflammation, got rid of the itching and healed the wound. Then Opus was sound asleep without the cone. The owners and the vet. are writing this up for a pet society.

YELS, Cosmetic and Medical Cream

- Development:
- Drew Dai from KareBay Biochem in NJ is producing the active chemical YEL002.
- AMR in Los Angeles is producing the cosmetic and medical cream
- Bulk Apothecary is producing the jars
- Robert Rudell is producing the labels
- Made in America, completely natural, organic and vegan, produced with energy of the power of the sun, renewable energy, completely green, recycled packaging. It is tested on humans not on animals.
- www.protecta-skincare.com

YELS, Cosmetic and Medical Cream

- Development:
- We are negotiating with all cosmetic companies in the world
- It is on Rangeme, with 19,000 buyers, 132 of the largest companies in the US, Australia, Canada, Netherlands, New Zealand and United Kingdom
- California Trade Alliance: 1000 of the largest international cosmetic buyers, 100 of which are in the US.
- Cloud kitchen, Sams Club
- Lots of clinical trials for all medical and cosmetic applications
- Psoriasis foundation, exzema foundation, arthritis foundation
- The website recognizes in which country the server of the computer is located and opens in the respective languages of that country in the entire world.
- www.protecta-skincare.com

Future development: Biological sunscreen

We will produce a new biological sunscreen that reduces the risk of melanoma. No FDA approval is needed, just confirmation that it is not toxic, which we already have. Our product is scientifically proven and should reduce the risk of melanoma.

YELS, Cosmetic and Medical Cream

Testimonies:

"Thank you! Wishing you a very happy 2022 and much success with your amazing cream. I will see you soon to reorder. Your cream got rid of a large bruise I had in record time. I'm really grateful for your cream. Be well,"
She bought 18 big jars so far and uses it all over her body including in her hair.

"BTW, a friend was over on Xmas day who hasn't seen my face for months. She kept staring at me and finally said, 'what do you Do? Your skin is glowing!'

Well, I have been using the protecta cream since April 😊😊😊"

She bought 12 large jars so far and uses it for her physiotherapy patients and family.

YELS, Cosmetic and Medical Cream

Testimonies continued:

From the Philippines, not perfect English but very good. They cured wounds, arthritis, gout and face inflammation. It is even more important in not so well-off countries because people go less often to the doctors and there are more untreated diseases and a lot of people who cannot afford a doctor or health insurance can still afford my very modestly priced medical cream.

“I am not an idol of creams especially healing creams, I did not believe that the ingredients were curing skin disease until I discovered the cream made by Prof. Dr. Schiestl and here changed my perspective when it comes to using body creams.

I used it on the part of my body that was itchy and here I saw that it healed. I also used this cream on my aunt who has a sore face and itches on the body and my aunt herself was happy with the result of this cream on her body. The wound was removed in just 2 days and the result was very good immediately. So I recommend this YELS Cream to people like me who didn't believe in creams before.”
